Handover Statement

We confirm that the product handover for our Software Engineering project has been completed with our stakeholder, Peter Alpass.

As part of the handover process, our group held an independent in-person meeting with the stakeholder to present the final product, explain its functionality, and discuss how it could be used. Following this, we also completed an electronic handover by email, providing access to the hosted application, the source material, the full source code, and the setup instructions required to run the product locally.

The stakeholder has confirmed receipt of our handover communication. The source code and supporting material have been made available through the GitHub repository listed above, with additional files and setup instructions also provided by email.

The hosted version of the application is currently available at the link above for immediate access. The login details have been provided directly to the stakeholder by email. We also offered to support the stakeholder with local setup after the examination period, should any further assistance be required.

This document confirms that the client has received the product handover and has been provided with the necessary materials to access, review, and run the system.
